

Push Button XB4 22mm

The pushbutton may be one of the smallest components in an industrial control panel, but it is also one of the most important. For instance, the XB4 22mm Pushbutton is engineered to provide dependable manual control for starting, stopping, resetting, and operating industrial equipment. Built with a rugged chromium-plated metal bezel, spring-return mechanism, and silver alloy contacts, it delivers up to 10 million mechanical operations and 1 million electrical cycles, ensuring long-term reliability in demanding environments. Its IP65 protection, wide operating temperature range, and international compliance standards make it suitable for factories, processing plants, and automated machinery.

Pushbuttons serve as the direct interface between operators and machines, allowing immediate intervention whenever automated systems require manual control. Whether initiating production, resetting a fault, or safely stopping equipment. Every press represents a deliberate action, to stop operations from potential damage, to start operations running smoothly, or reset to keep operations running efficiently and safely.

Without reliable pushbuttons, seemingly routine tasks can quickly become critical. A jammed conveyor that cannot be stopped immediately may damage motors or destroy product lines. A machine that cannot be reset promptly can extend costly downtime. During maintenance, the inability to manually control equipment can increase safety risks for technicians and operators alike. In high-volume manufacturing, even a few minutes of lost production can translate into significant financial losses.

The XB4 22mm Pushbutton is designed to eliminate these possible outcomes by delivering consistent performance when it matters most. Its robust construction, industrial-grade protection, and exceptional durability make it a trusted solution for modern control panels, proving that even the simplest of components can play a vital role in keeping industrial operations safe, productive, and reliable.
