

The **N150 IoT** is an AlwaysOn controller, a pioneer in its category, developed for the management and control of refrigeration assets in a wide variety of environments.

Its reliable control algorithm, input and output capabilities, combined with continuous connectivity to **Sensifys** CoolerCloud platform and the power of Al-driven processing, enable highly efficient control, real-time alert generation, and remote monitoring and management of coolers.

This controller is ideal for obtaining usage and performance metrics of coolers, reporting theft or loss through geolocation, and configuring devices remotely to prevent or streamline technical service operations.
